Integrated Logistics Partner for Your Business Growth

Free Kurir Indonesia is an integrated logistics and delivery service provider dedicated to delivering fast, safe, and efficient shipping solutions. Amid the rapid growth of the digital economy and e-commerce, we are committed to meeting the growing demand for reliable goods transportation—serving corporate clients, SMEs, and individual retail customers.

Driven by a digital tracking and supply ecosystem, our end-to-end platform leverages advanced Bluetooth and GPS technology integrated directly with production batch codes, enabling precise item-level tracking for every unique unit shipped. Beyond standard logistics, we also serve as a comprehensive corporate asset tracking system, giving enterprises real-time visibility and absolute control over their valuable assets across all business locations and regional branches.

Supported by a reliable fleet, intelligent tracking software, and a professional team with extensive experience in supply chain management, **Free Kurir Indonesia** is committed to ensuring that every package, asset, and shipment reaches its destination on time, secure, and fully traceable.

Our Vision

To become Indonesia's leading and most trusted logistics and delivery company, recognized for speed, security, and exceptional service.

Our Mission

To ensure the highest standard of service for all our customers and business partners in Indonesia, our primary mission is to:

Speed & Accuracy

Provide on-time delivery services through efficient route planning and operational management.

Guaranteed Security

Maintain the integrity and security of every shipment from pickup to final delivery.

Technological Innovation

Integrate digital systems to simplify booking, tracking, and logistics management.

Customer Satisfaction

Provide friendly, responsive service and flexible logistics solutions

Partner-Centric Approach

tailored to the needs of our business partners.

Our Services

Powered by a reliable operational infrastructure and a widely integrated digital distribution network—spanning headquarters, storage warehouses, down to local sub-branches—**Free Kurir Indonesia** provides comprehensive end-to-end supply chain and delivery solutions.

Our services are flexibly designed to meet varying scales of freight mobility, ranging from large-scale industrial cargo distribution and asset management to high-precision logistics solutions that cover every line of your business operations.

Regular Delivery

Intercity and interprovincial delivery services with affordable rates and consistent delivery times.

Express & Same Day Delivery

Express delivery solutions for urgent documents or packages that need to arrive on the same day.

Corporate Logistics & B2B Solutions

Specialized logistics services for corporations, factories, and distributors requiring scheduled supply chain management or large-scale cargo transportation.

E-Commerce Fulfillment

Integrated logistics solutions for online businesses, marketplace sellers, and SMEs, supporting both individual and bulk shipments.

Cargo & Heavy Delivery

Safe transportation of large or heavy goods using specialized vehicles and dedicated fleets.

Why Choose Us?

Free Kurir Indonesia is more than just a standard logistics provider. We are a dedicated partner committed to driving your business goals through efficient, integrated, and reliable logistics solutions.

Extensive Coverage

A delivery network covering key strategic areas to ensure seamlees and reliable connectivity.

Real-Time Tracking System

Allows customers to monitor their package location in real time through a transparent and reliable digital tracking system.

Professional & Trained Team

Dedicated, honest, and highly trained couriers and operational staff who prioritize the safety and security of every shipment.

Competitive Rates

Offering affordable pricing with premium-quality services without compromising the safety and security of your shipments.

Free Kurir Indonesia is a premier choice in the logistics industry, backed by compelling strengths.

We bring experience, expertise, and excellence to the delivery of integrated logistics solutions. Powered by advanced technology, a vast national network, and an unwavering commitment to safety and environmental sustainability, we deliver reliable and efficient services to our customers.

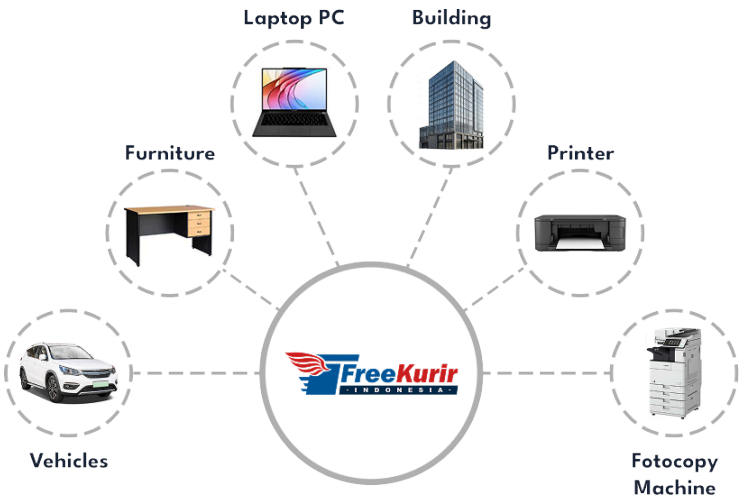

Flexibility, customer satisfaction, and long-term partnerships are the core values we uphold. When you choose Free Kurir Indonesia, you choose to work with a logistics partner that understands your needs and is committed to driving your business success. In a complex logistics landscape, Free Kurir Indonesia provides the reliable and comprehensive solution you need to successfully achieve your business goals.

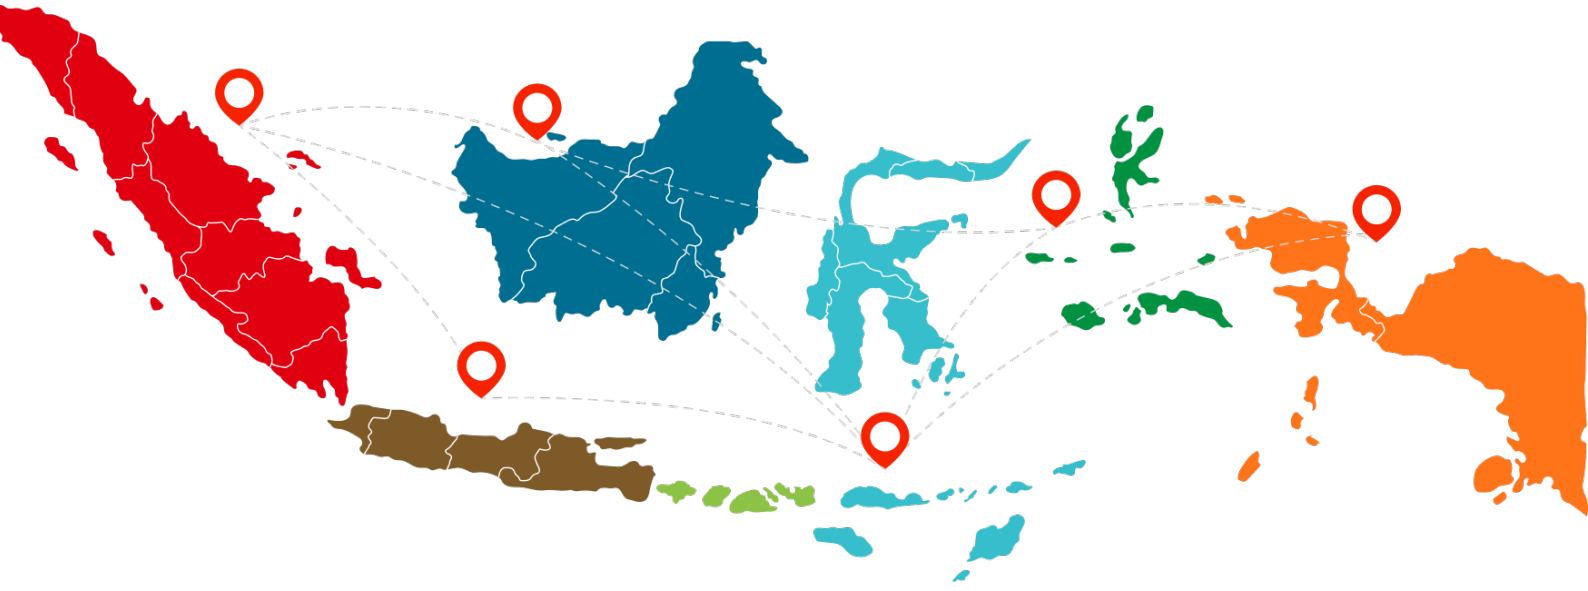

As Corporate Asset Tracking System

Free Kurir Indonesia provides an intelligent, end-to-end digital Asset Tracking System that allows enterprises to monitor, trace, and audit all physical assets and inventory in real time—no matter where they are located.

Never Lose Track of Your Valuable Assets

Imagine managing a network of 30 operational branches across Indonesia. Your team receives an inventory report indicating that a critical equipment unit should be located at your Surabaya branch. However, a physical check shows it isn't there.

3-Step Asset Resolution Flow

3-Step Asset Resolution Flow

1

Search

Search the item's unique production/asset code on the system.

2

Locate

Trace the exact physical location of the missing unit instantly.

3

Resolve

Discover that the item was misplaced or transferred to another branch without relying on manual paperwork.

Operational Challenges We Solve

Automated safeguards designed to eliminate human error across your supply chain.

Lost Goods/Unknown Shipment Location in Transit

Challenge:
Every item is assigned a unique serial number and tracked digitally at every stage of the shipping process, with a complete audit trail, timestamps, courier details, and fleet information.

Solution:
Real-Time Visibility & Measurable Lead Times

Missing Handover Documents/Approvals Delayed for Days

Challenge:
Handover documents (BAST) are generated automatically with unique reference numbers. Authorized personnel can provide digital signatures, while head office reviews and approves documents through the system.

Solution:
Faster Document Approvals — From Days to Minutes

Damaged/Defective Goods Reaching Branches Without Documentation

Challenge:
Quality inspections are performed before goods are dispatched. If damage is identified, staff can submit a report with supporting photos and item details to initiate the replacement or claims process.

Solution:
Fewer Interdepartmental Disputes & Better Warranty Claim Management

Goods Incorrectly Distributed Between Warehouses & Branches

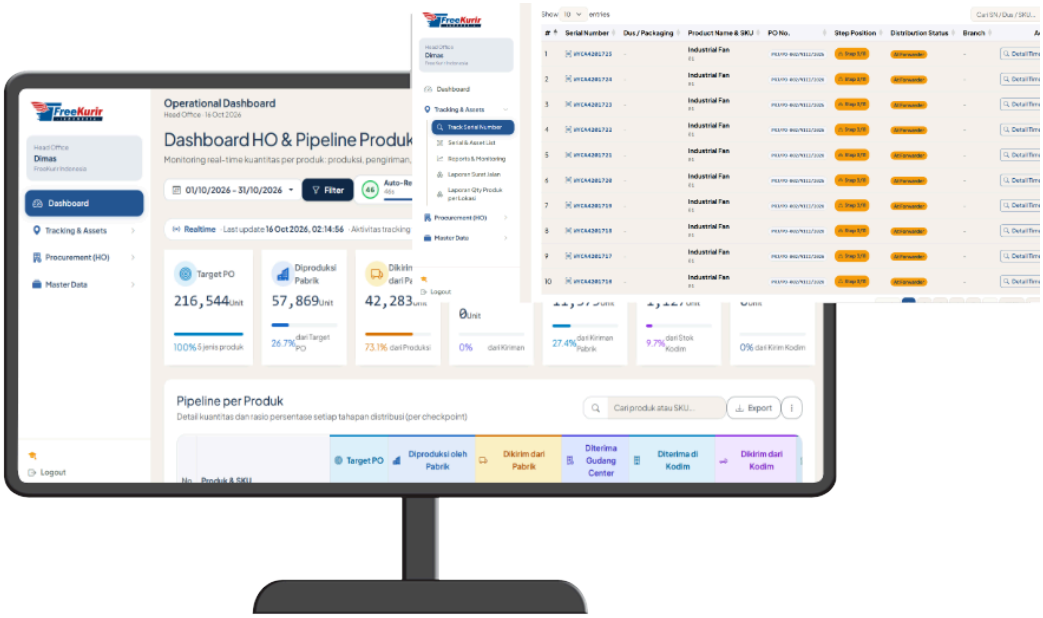

Challenge:
Barcodes or QR codes on delivery documents are used to validate items, destinations, and shipping documents. If the information does not match, the system blocks the receiving process and generates an automatic notification.

Solution:
Reduced Risk of Shipping Errors & Inventory Discrepancies

Logistic Tracking & Supply Chain System

Free Kurir Indonesia's Tracking & Supply Chain System is an integrated digital solution designed to monitor and optimize logistics distribution in real time, from central facilities down to operational field units. Powered by a web-based platform for head office management and a responsive mobile application for field teams, it enables highly efficient, transparent, and controlled supply chain operations.

Factory & HQ Admin Portal

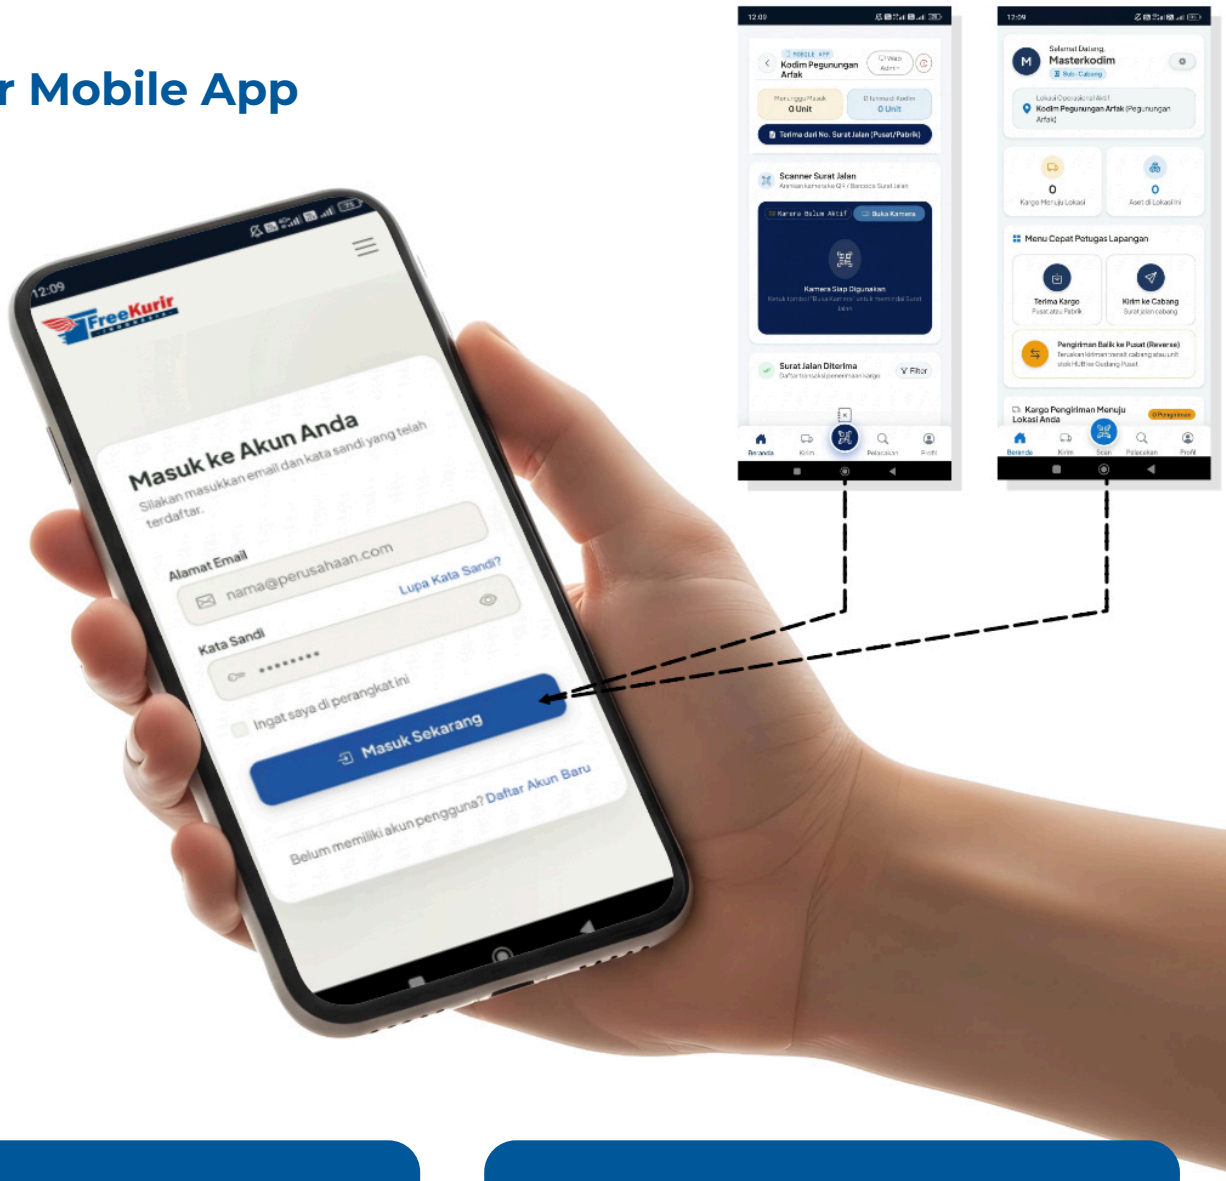

Factory Shipment Request

Simplifies how factories track shipments to various sub-branches, complete with real-time central approval status (Pending, Approved, to Dispatched).

Barcode & Label Printing

Automatic Barcode and QR Code printing for products and packaging, accelerating verification and minimizing errors.

Field Officer Mobile App

Region-Based Authentication & Access

A secure login system featuring role-based access control and specific active operational locations tailored to each unit or sub-branch (e.g., Arfak Mountains Kodim Sub-Branch).

Delivery Order Scanner

Leverages smartphone cameras to instantly scan delivery order QR/Barcodes, accelerating transaction recording for incoming cargo at branch levels.

Field Officer Quick Menu

- **Cargo Receiving**

  Processes the receipt of goods from the central facility or factory.

- **Branch Dispatch**

  Manages onward shipments using branch delivery orders.

- **Reverse Logistics**

  Handles returns or the forwarding of transit shipments from HUB stock units back to the center.

Our Valued Clients & Partners

As the preferred logistics partner driving seamless business distribution across regions, we take pride in collaborating with forward-thinking enterprises. Together, we build reliable, fast, and transparent supply chain solutions that empower businesses to scale and reach their customers effortlessly.
